

Security Policy

PURPOSE

A Security policy ensures that Landscapers INC complies with the Occupational Safety and Health Act and relevant legislation. It provides guidelines for establishing and implementing programs that will reduce workplace hazards, protect lives and promote employee security. The purpose of this document is to provide a secure working environment by protecting ourselves, our assets and our operations against risk of injury, loss or damage from criminal, hostile or malicious acts.

SCOPE

This policy applies to all users of the Landscapers INC owned leased / hired facilities and equipment. Landscapers INC policy identifies management and employee roles in health and safety. It provides for a work analysis to determine the presence of hazards. It also specifies hazard prevention and control procedures, and outlines required employee training.

This policy also describes employee roles and the contribution staff make to the safe and secure use of Landscapers INC assets, equipment and information.

POLICY STATEMENT

Landscapers INC, together with our employees and contractors, will provide a secure working environment by protecting ourselves, our assets, equipment, information and our operations against risk of injury, loss or damage from criminal, hostile or malicious acts.

We will routinely assess security risks and develop processes to ensure those risks are effectively managed.

We will comply with security measures when in place and have a duty to report to the appropriate authority any security breaches, unethical conduct, and conflicts of interest that come to our notice.

Our security performance will be monitored and measured on a continuing basis.

Equipment Security

All general equipment must be located in suitable physical locations that:

- Reduce risks from environmental hazards, for example, heat, fire, smoke, water, dust and vibration.
- Reduce the risk of theft, for example, **if necessary**, items such as brush cutters should be physically chained down.
- Facilitate workstations handling sensitive data being positioned so as to eliminate the risk of the data being seen by unauthorized people.
