

1 PURPOSE

- 1.1 The purpose of this procedure is to describe the proper means for cleaning up spills and disposal of any material which could pollute the state's waterways if allowed to enter the Landscapers INC client sites storm sewer system.

2 SCOPE

- 2.1 This SOP specifically applies to spills caused by leaking equipment, broken or open containers. Some examples of spills include Petro Chemicals, Pesticides, diesel fuel, fertilizers, motor oil, and transmission fluid. These types of illicit discharges may result in significant fines from regulatory agencies.

3 PROCEDURE

First Responders

First Responders will typically be a driver or staff or member of public who notices a spill. As soon as a spill is discovered, the initial action should be to protect personal safety and to prevent the pollutant from entering nearby drainage ditches or stormwater drop inlets. The person observing the spill should take immediate action to prevent further spillage and to confine the spilled material.

The general instructions to contain a spill are:

- Notify the on-duty Supervisor as soon as the spill is discovered.
- If possible, to do so safely, stop the cause of the spill.
- This may include securing fluid/fuel caps or attempting to plug or cover punctures or gashes in containers. Do not attempt to stop the spill if the situation creates any degree of personal danger.

Supervisor's Response

- The on-duty Supervisor should respond to the spill scene to contain the fluids using spill absorbent.
- If the spill is along a route, the Supervisor should follow the route to ensure there are no additional spills.
- The on-duty Supervisor should return to any treated spill locations to clean up the spill absorbent
- and ensure that all the original spills have been contained.

The on-duty Supervisor should immediately contact the Operations Manager and give the following information:

- Location of spillage
- Type of material (i.e. diesel, pesticide, fertilizer etc.)
- Estimated quantity and/or extent of spillage
- A brief description of measures that have been taken to confine the spilled material and prevent further spillage.

4 RESPONSIBILITIES

Compliance, monitoring and review

First responder

Supervisor/Controller

- aligns with relevant legislation, government policy and/or Landscapers INC requirements/strategies/values
- is implemented and monitored
- is reviewed to evaluate its continuing effectiveness

Reporting

Reporting of all incidents is a requirement.

Records management

Staff must maintain all records relevant to administering this policy and procedure in a recognized Landscapers INC recordkeeping system.
